

YOU SPEAK IN: ACT 0 (S1-1 → S1-3) · ACT 1 (S2-4, S2-5) · ACT 5 closing (S6-3). You also open the whole presentation. Keep the narrative honest and confident. Lead all transitions.	
ACT 0 · [S1-1] "Good morning, everyone. Before we walk you through the system we've built, we want to share a quick reality about our project."	ACT 1 · [S2-4] · AFTER BRIX'S PAIN-POINT HOOK "From an organizational standpoint, this represents a major management gap. Small businesses in the gifting space often operate without any formal system. Orders are tracked in messy chat logs, inventory is guessed, and revenue is calculated from memory. The core management functions are simply absent."
ACT 0 · [S1-2] "In truth, PureBlooms was developed by a single developer working directly with a client. However, to portray this case study in an Organizational Management setting and demonstrate its commercial viability, we have structured our presentation a little differently today."	ACT 1 · [S2-5] "PureBlooms is designed to bridge this gap. It's not just a website; it is an operational control system that structures these chaotic processes. Let's show you how this looks on the customer's end."
ACT 0 · [S1-3] "We will be stepping into the roles of the key organizational stakeholders who interact with a system like this: the Project Managers, the Customers, the Sellers, and the Developers. This allows us to analyze how PureBlooms fits into the broader principles of Organizational Management." → HAND OFF: Ruth Joy (P2) continues the frame setup.	DEMO CUE (screen): <i>PureBlooms storefront loads. Hand off to P3 & P4.</i> ACT 5 · [S6-3] · FINAL CLOSING · AFTER RUTH JOY'S 4 FUNCTIONS "We are IT students, but today we wanted to show you more than just code. We wanted to present an organization in motion: how it coordinates, operates, and controls its data." "PureBlooms transforms a chaotic, unorganized flower shop into a structured business entity. Thank you, and we are now open for your questions." → END OF PRESENTATION. Stay for Q&A.

Duration budget	ACT 0 ~1.5min (shared w/ P2) · ACT 1 lines ~40s · ACT 5 close ~40s
Contributions	Presentation Coordination, Script Writing, Presenter Dashboard Integration, Docker Configuration

YOU SPEAK IN: ACT 0 (S1-4, S1-5) · ACT 5 closing (S6-1, S6-2). You own the OM-theory framing — both the setup and the wrap. Land the four functions of management clearly.	
ACT 0 · [S1-4] · AFTER DAVID'S S1-3 "Exactly. By analyzing the system through these distinct lenses, we can map how a simple flower shop operates under the four core functions of management: Planning, Organizing, Leading, and Controlling." ACT 0 · [S1-5] "Our system is called PureBlooms, an e-commerce platform designed for a local flower shop. Let's start by looking at the organizational gap and the core business problem it solves. Brix, take us away." → HAND OFF: Brix (P3) — the problem hook. ACT 5 · [S6-1] · AFTER DEVELOPER ACT (P7/P8) "To bring this full circle, Organizational Management is centered around four core functions, and we have built PureBlooms around all four:"	ACT 5 · [S6-2] · THE FOUR FUNCTIONS — SPEAK SLOWLY, ENUMERATE "1. Planning: Managed through the Settings module, defining the parameters, payment rules, and operating states of the shop." "2. Organizing: Enforced by our Role-Based Access Control and user permission hierarchies." "3. Leading: Supported by our live KPI dashboard, which gives leadership the information they need to guide the business." "4. Controlling: Implemented through our real-time inventory alerts, order pipelines, and structured reports." → HAND OFF: David (P1) for the final close.

YOUR QUICK REFERENCE

Site URL	https://37ab-136-239-226-85.ngrok-free.app (changes per ngrok session)
Key emphasis	The 4 functions: Planning · Organizing · Leading · Controlling
Duration budget	ACT 0 ~50s (shared w/ P1) · ACT 5 close ~50s
Contributions	OM Integration Analysis, Presentation Slides design, Narrator

YOU SPEAK IN: ACT 1 problem hook (S2-1 → S2-3) · ACT 2 customer experience (S3-1, S3-3, S3-5, S3-7). You alternate with Ydel (P4). You drive the live storefront demo. Log in as brix@customer.com BEFORE Act 2.	
ACT 1 · [S2-1] · THE HOOK "Picture this. You want to send flowers to someone special. You search on Facebook and find a small flower shop. You DM them. You wait. You follow up. They reply hours later, only to tell you that the bouquet you wanted is already out of stock." ACT 1 · [S2-2] "So you try another shop. You message them, and they send you a GCash QR code. You pay, send the screenshot, and... nothing. No confirmation, no receipt, no idea when it will arrive. You just wait, hope, and stress." ACT 1 · [S2-3] "This is the everyday reality of buying from a small, unorganized flower vendor. And it is completely unnecessary." → HAND OFF: David (P1) reframes it as an OM gap, then back to you for Act 2. ACT 2 · [S3-1] · STOREFRONT "As a customer, I want a storefront I can trust. The moment I land on the PureBlooms homepage, I see featured products, categories, and a clean, responsive layout. There's no clutter, making my browsing experience smooth." DEMO: Scroll through the featured product grid slowly.	ACT 2 · [S3-3] · CART & BUY NOW "I can add items to my shopping cart, or use the 'Buy Now' button to skip the cart altogether. This direct checkout path respects the customer's time." ACTION: Click "Add to Cart" → go to /customer/cart → show quantity controls → click "Proceed to Checkout". ACT 2 · [S3-5] · PAYMENT "For payment, we support Cash on Delivery and GCash. I'll select Cash on Delivery, fill in my shipping address, and submit the order." ACTION: Select "Cash on Delivery" → fill: Name Brix Cruz, Address 123 Sample Street, City Tagudin, ZIP 2728, Phone 09175555555 → click "Place Order". ACT 2 · [S3-7] · TRACKING TIMELINE "Instead of messaging a seller and waiting for replies, I can see a live status timeline: Pending, Processing, Shipped, and Delivered. The process is completely transparent." → HAND OFF: John Paul & Von Eiron (P5/P6) — operations center.

Demo login	brix@customer.com · demo123 (Customer) — log in BEFORE Act 2
Also ready	Second browser tab logged OUT (for storefront browsing view)
Site URL	https://37ab-136-239-226-85.ngrok-free.app
Duration budget	Act 1 ~40s · Act 2 ~1.5min (shared w/ P4)
Contributions	Customer Journey Flow Testing, Storefront Feedback, Persona presenter

YOU SPEAK IN: ACT 2 customer experience (S3-2, S3-4, S3-6). You alternate with Brix (P3). Your angle = UX/design analysis. Watch Brix's actions and chime in with the "why it matters."	
ACT 2 · [S3-2] · AFTER BRIX SCROLLS HOMEPAGE "From a design perspective, this layout minimizes what we call cognitive load. The product card displays only essential details: image, name, category, and price. This minimalist design helps guide the customer toward a decision quickly." ACTION (you drive): Click "Classic Red Rose Bouquet" (P2,500) → shows full description, stock status.	ACT 2 · [S3-4] · ADD-ONS · AFTER BRIX'S CART DEMO "On the checkout page, the system offers customizable add-ons like gift wrapping or a message card. These are not hardcoded; the admin can update, price, and toggle these add-ons dynamically. This is a subtle yet powerful tool for average order value optimization." ACTION (you drive): On /customer/checkout → select "Gift Wrapping - Premium" (P150) + "Personalized Message Card" (P50) → scroll down to show total updating.
	ACT 2 · [S3-6] · CONFIRMATION & EMAIL "Once submitted, the system generates a unique order tracking number and sends an automated confirmation email. Now, let's track our order." ACTION (you drive): On order success page → copy the order number → (optional) open Mailpit at :8025 to show confirmation email → click "Track Order".

Key phrase	"cognitive load" — land it clearly
Mailpit (email preview)	http://localhost:8025
Site URL	https://37ab-136-239-226-85.ngrok-free.app
Duration budget	Act 2 ~1.5min (shared w/ P3)
Contributions	UI/UX Design auditing, Slides formatting, Customer Persona presenter

YOU SPEAK IN: ACT 3 seller experience (S4-1, S4-4, S4-6, S4-8). You alternate with Von Eiron (P6). You drive the admin dashboard demo. Log in as johnpaul@pureblooms.com BEFORE Act 3, navigate to /admin/dashboard.

ACT 3 · [S4-1] · ENTER OPERATIONS "Now let's switch roles. As the business owner or operations manager, this dashboard is my control room. The moment I log in, I get real-time operational insights." DEMO: <i>Point to the KPI cards on the dashboard.</i>	ACT 3 · [S4-6] · SALES REPORTS "Under Sales Reports, we can see monthly revenue trends and average order values. This integrates the Financial Management aspect of OM directly into the system, avoiding the need for messy offline bookkeeping." ACTION (you drive): <i>Click sidebar "Reports" → /admin/reports/sales.</i>
ACT 3 · [S4-4] · ORDER PIPELINE · AFTER VON'S KPI LINES "Here is our order pipeline. Every transaction is logged here. As the administrator, I can update the order status as it moves from Pending to Shipped, and finally to Delivered." ACTION (you drive): <i>/admin/orders → find DEMO-0001 (Pending, Brix) → click Edit → change status Pending → Processing → Shipped → show timestamp updates.</i>	ACT 3 · [S4-8] · CUSTOMER REPORT (CRM) "Our Customer Report functions as our CRM (Customer Relationship Management) database, listing order frequencies and helping us track buyer retention." ACTION (you drive): <i>Click "Customer Report" tab → /admin/reports/customers.</i>

Contributions	Admin Panel features validation, database testing, Seller Persona presenter

YOU SPEAK IN: ACT 3 seller experience (S4-2, S4-3, S4-5, S4-7, S4-9). You alternate with John Paul (P5). Your angle = KPIs, Controlling function, financials & inventory.	
ACT 3 · [S4-2] · KPIS = CONTROLLING "These metrics, including Total Revenue, Orders, Pending Orders, Low Stock Alerts, and Add-on Sales, represent our KPIs (Key Performance Indicators). In Organizational Management, monitoring these values is the Controlling function. It tells us if our logistics are matching demand." ACT 3 · [S4-3] · LOW STOCK = PROACTIVE "A 'Low Stock Alert' tells us exactly when to replenish inventory, moving us from reactive firefighting to proactive management." ACT 3 · [S4-5] · BRIDGE TO REPORTS "This pipeline acts as our digital operations flow. Next, let's look at the financial and inventory analytics under the Reports section." ACTION (John Paul drives): Click sidebar "Reports" → /admin/reports/sales.	ACT 3 · [S4-7] · INVENTORY REPORT "The Inventory Report tracks stock levels and shows us the total monetary value of our warehouse asset. Knowing this value is crucial for balance sheets and cost control." ACTION (John Paul drives): Click "Inventory Report" tab → /admin/reports/inventory. ACT 3 · [S4-9] · SETTINGS = PLANNING "Lastly, the Settings page controls shop variables, payment methods, and includes a Maintenance Mode toggle to temporarily take the store offline gracefully. This represents the Planning function: defining boundaries for daily operations." → HAND OFF: Aaron Jake & Novel (P7/P8) — system architecture.

YOUR QUICK REFERENCE

Demo login	von@pureblooms.com · demo123 (Seller role)
Key concepts	KPIs · Controlling function · Low Stock = proactive · Settings = Planning
Site URL	https://37ab-136-239-226-85.ngrok-free.app
Duration budget	Act 3 ~1.5min (shared w/ P5)
Contributions	Financial & Inventory reports testing, OM documentation contribution, Seller Persona presenter

YOU SPEAK IN: ACT 4 developer perspective (S5-1, S5-2, S5-4). You alternate with Novel (P8). Your angle = architecture, stack, security. Confident engineering tone.	
ACT 4 · [S5-1] · OPEN THE HOOD "Now, let's peek under the hood. Building a system that looks good is only half the battle. Making it reliable, secure, and production-ready is where engineering matters."	ACT 4 · [S5-4] · SECURITY · AFTER NOVEL'S DATA-INTEGRITY LINE "Second, Security . Addon prices are validated strictly on the server-side, meaning users cannot alter prices using browser inspector tools. We also implement password throttling to block brute-force attempts, and strict Role-Based Access Control (RBAC) middleware to protect the admin panel."
ACT 4 · [S5-2] · THE STACK "PureBlooms is built on the Laravel framework using a clean Model-View-Controller (MVC) architecture. The frontend is powered by Blade templates and Tailwind CSS , bundled with Vite for fast load times. The entire application is containerized using Docker , ensuring that it runs reliably in any environment."	

YOUR QUICK REFERENCE

Stack to name	Laravel (MVC) · Blade · Tailwind CSS · Vite · Docker · MySQL
Security points	Server-side price validation · password throttling · RBAC middleware
Duration budget	Act 4 ~1.25min (shared w/ P8)
Contributions	Main repository maintenance, Laravel codebase audit, Developer presenter

YOU SPEAK IN: ACT 4 developer perspective (S5-3, S5-5). You alternate with Aaron Jake (P7). Your angle = non-functional requirements: data integrity, reliability, speed.	
ACT 4 · [S5-3] · NON-FUNCTIONAL REQS + DATA INTEGRITY "But beyond the stack, we focused on Non-Functional Requirements to solve common real-world failure points." "First, Data Integrity . The checkout process is wrapped in database transactions. If database writes fail or a connection drops mid-process, the database rolls back completely. The customer is never double-billed, and stock is never deducted incorrectly."	ACT 4 · [S5-5] · RELIABILITY & SPEED · AFTER AARON'S SECURITY LINE "Third, Reliability and Speed . We prevent duplicate orders by generating unique cart session tokens. If a user double-clicks the purchase button, the system intercepts the duplicate request. We also cache shop settings to decrease database queries, and integrated an toggleable maintenance middleware." → HAND OFF: Ruth Joy (P2) & David (P1) — OM closing.

YOUR QUICK REFERENCE	
Your 3 pillars	Data Integrity (transactions) · Reliability (dup-token) · Speed (cache)
Key phrase	"Non-Functional Requirements" — frame it deliberately
Duration budget	Act 4 ~1.25min (shared w/ P7)
Contributions	Security features validation, non-functional requirements auditing, Developer presenter
